03:26

Let us show a representation in $R(n,k)$ say 5,3 as bars in decreasing order like

We can now show a one-one correspondence to $Q(n)$ by reading bars wrt y axis like shown

for any representation in R only 1 is there in Q
the uniqueness is trivial to show as if 2 R 's
give same Q then all bars have to be same
all Q can give a R hence we are done
